

What it is:

A liquid herbicide for non-selective vegetation control in and around the garden, established trees and shrubs, sidewalks, driveways, and patio.

Features & Benefits:

Munger's Horticultural Vinegar is effective, while being environmentally friendly, safe for children & animals, and leaves no harmful residue in the soil.

Directions:

Best results are achieved from spring and early summer applications to actively growing young weeds. Degree of control depends on several factors, including size and stage at application. Small annual weeds may be completely controlled with a single application. Control of larger, more established weeds, not completely desiccated with one application may be short-term and require retreatment. Weeds that are mature, dormant or hardened due to moisture stress tend to be more tolerant to herbicide treatment. Complete coverage of undesirable vegetation is necessary to achieve control. Only contacted vegetation will be affected. Seedling perennial weeds may be controlled with a single application; however, repeat application is required for control of regrowth of established perennial weeds. Rainfall within 1 hour of application will reduce degree of control. DO NOT re-enter the treated area until the residues have dried.

Other:

- Use caution (rubber gloves, goggles) when handling strength product.
- When spraying, interlocking bricks, be sure to wash off to prevent etching.
- Will not harm earthworms or beneficial bacteria & fungi.
- Leaves no harmful residue in the soil.
- Apply on wind free days and be careful to prevent overspray from contacting desirable vegetation.
